# Introduction

To support the creation of a global data ecosystem on digital agriculture, Digital Agri Hub provides a data entry facility for digital solution providers. This facility offers solution providers the opportunity to register their digital solutions for agriculture deployed in low- and middle-income countries or to update existing data in the database. All solutions will be featured on the Digital Agri Hub dashboard with the most up-to-date information directly from the source, and become more visible for investors, donors, and other stakeholders in the D4Ag sector.

This manual provides guidance on how to use the Digital Agri Hub data entry facility. It explains the registration process and gives comprehensive support in adding the data of digital solutions to the Digital Agri Hub database and dashboard.

# Adding and updating digital solutions

## Data entry account

To access the Digital Agri Hub data entry application you need a user account (username/password). You can request an account through [the data sharing section our website](#) or directly through [this link](#). Through the registration form, you will be asked to fill in your name, email, and password. We also ask you to provide the name of your organisation and to indicate if any of your digital solutions are already in our database. Based on your organisation name and email address, suggestions for already solutions will be provided. This will allow to link any solutions that already exist in our database to your account.

The screenshot shows a registration form titled "Registration". It contains several input fields: "your name\*" with the value "Solution Provider", "your organisation\*" with "Agtech", "your email address\*" with "solprov@agtech.com", "your personal website", "your password\*" (masked with dots), and "confirm password\*" (masked with dots). Below the fields is a section with instructions: "We have digital solutions on the Digital AgriHub that might be developed by your organisation. Please check the solutions that you think are yours (you can leave everything unchecked if you want to add new solutions). NB: If you are not sure whether the solution is yours, you can click on the link to get more information. You can also add comments below." This section lists two categories: "RML AgTech" with a sub-item "RML AgTech Pvt. Ltd. (RML)" and "AgtechApps" with a sub-item "AgTechApps", each with an unchecked checkbox. At the bottom is an "any remarks" field and two buttons: a green "REGISTER" button and a "Login" link.

After submission of your account details, you will receive a confirmation mail with a link to activate your account. Once activated, you can start adding or updating your solutions through the following URL: <https://digitalagrihub.org/data-entry>

## Adding or updating digital solutions

Once you have your account, Digital Agri Hub allows you as an organisation to register one or more of your digital solutions for agriculture deployed in low- or middle-income countries. To facilitate that, in case your organisation is new to Digital Agri Hub, you will first need to provide some general information on your organisation. Once that is submitted, you can add one or more digital solutions.

In the case that your organisation and digital solutions are already existing in Digital Agri Hub, we have linked these up to your data entry account. This allows you to directly to update your organisation details and existing solutions, or to add additional solutions.

## Organisation

Digital Agri Hub stores digital solutions per organisation, so before you can add your first solution you will need to register your organisation.

In case we already have one or more of your solutions in our database, you will have the opportunity to update (or delete) the data of your organisation and to edit digital solutions. You may also add another organisation if needed.

Choosing for adding or editing your organisation will lead you to the organisation data entry form. In case your organisation is not yet registered, you will need to finalize that before you can add your digital solutions.

## Edit organisation

Name \*

Wageningen University & Research|

The name of the organisation that deploys the digital solution (so not necessarily the organisation that has developed the solution)

URL \*

http://wur.nl

The URL of the homepage of the organisation's primary website

Description \*

Wageningen University & Research is a collaboration between Wageningen University and the Wageningen Research foundation.

### 'To explore the potential of nature to improve the quality of life'

That is the [mission](#) of Wageningen University & Research. Over 7,200 employees, 13,200 students and over 150.000 participants to WUR's Life Long Learning from more than hundred countries work everywhere around the world in the domain of healthy food and living environment for governments and the business community-at-large.

A short description of the organisation's mission and objectives with regard to digitalisation in agriculture.

Headquarter country \*

Netherlands

Country where the organisation headquarter is located.

Year founded

1920

The year in which the organisation was founded.

Organisation type \*

Other

The type of the organisation that deploys the solution and brings it on the market. [read more...](#)

Save your data using the "save organisation" button.

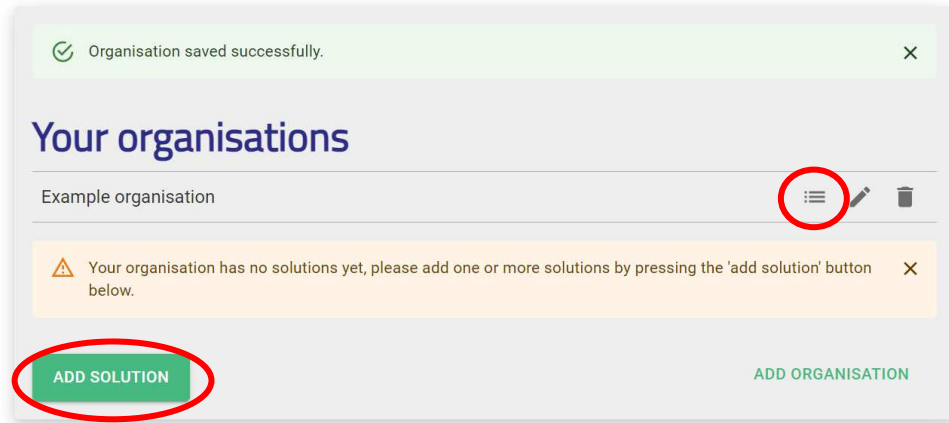

CANCEL

SAVE ORGANISATION

## Digital solutions

Once your organisation details are in, you can directly open the current list of digital solutions registered.

If you're new to Digital Agri Hub, you will be able to start adding your solutions under your organisation (see action button indicated below).

This will open a new form that will allow you to add a solution. In case we already have solutions in our database for your organisation, you will see a list of these solutions and you will be able to edit (or delete) your existing solutions.

--- continues on next page ---

Adding or editing a digital solution will lead you to the solution data entry form. The form will guide you through several steps that allow you to add or update the data we register for digital solutions.

**Edit solution**

**General**

Name \*  
Digital Agri Hub  
The name of the deployed digital solution

URL \*  
http://digitalagrihub.org  
The URL of the webpage where the deployed solution is introduced.

Description \*  
**Monitoring digital developments for agricultural transformation worldwide**  
Digital Agri Hub provides insights into digital agriculture for small-scale producers, and supports investments in solutions that have real impact on the ground.  
A short description of the characteristics and objectives of the digital solution

Year of launch \*  
2021  
The year that the solution was introduced to the market

Sector \*  
Multi-sectoral or sector-independent  
The agriculture sector that the digital solution is primarily supporting [read more...](#)

BusinessModels  
Add business models  
The business model(s) that the digital solution is based on. [read more...](#)

Platform

Mandatory fields are marked with "\*" and you will be notified (in red font) if any of those fields are not filled in.

Sector \*  
Please select an option

You can navigate through the sub forms through the "next step" and "back" buttons at the bottom of every form and store your data with the "save solution" button.

# Additional guidance

## Data editing tips and remarks

### Mandatory and optional fields

Data fields may be mandatory or optional. All mandatory fields are marked with \*. Note that all mandatory fields need to be filled in before you can submit your organisation or solution.

### Definitions and explanations

For every field a short description is provided just under the data entry fields. In some cases, this also includes a “read more...” link. This link opens a dialog window with further explanations, for instance giving the definitions of the various options that are provided in available picklists (e.g. for use cases, technologies etc.).

### Description fields

The description fields for organisation and solution allow longer texts and basic formatting of the text. We ask you to keep these texts concise where possible and to keep the formatting “functional”.

### Primary and secondary use cases

For the use cases (application domains) of a digital solution we always ask you to register the primary use case and associated sub use case. Besides, you may add some additional (secondary) use cases and sub use cases if relevant. This includes if needed the addition of other sub use cases of the primary use case.

### Regions and languages

It is impossible to include complete lists of all existing country regions and languages. We therefore allow the addition of regions (defined as regions **within** a country) and languages, in case these are not already provided in the available picklists. Before you do so, please make sure that the region (via a picklist offered for the chosen country) or language is not available yet. Note that added regions and languages will also become available for other data entry users.

### User numbers and revenue

To be able to track the evolution of the digital agriculture sector, we also ask you to provide data on user numbers and revenue. Since we realise that this concerns potentially competitive or otherwise sensitive data, these data fields are not mandatory and can be left blank. Analytics based on this data will only be published in aggregated form, for example when reporting on the global or regional state and progress of digital agriculture, where it cannot be traced back to individual organisations or solutions.

## Quality assurance and publication

New additions and data updates will not directly become visible in the Digital Agri Hub dashboard. We have implemented a moderation and quality review step before publishing to our website. This means that it can take a bit of time before you will see your data online. In case of potential issues or unclarities, we might get back to you for further clarification before we publish.

## Protection of your (personal) data

The data you provide will be published on Digital Agri Hub and made accessible through our solutions dashboard. We will not publish or share with others any personal data or data that will allow others to link to your personal data.

Data that can be considered competitive or otherwise sensitive will only be published in aggregated form, where it cannot be traced back to individual organisations or solutions. This currently includes the data on the number of (registered) users and revenue.

Obviously, the processing of personal data includes appropriate security measures. Therefore, Digital Agri Hub is secured. Your data is only accessible by authorized administrators and stored in a protected environment. WUR's starting point is NEN-EN-ISO/IEC 27002:2017 to make sure that any personal data is optimally secured. Data is stored in accordance with the [general guidelines of Wageningen University & Research](#).
